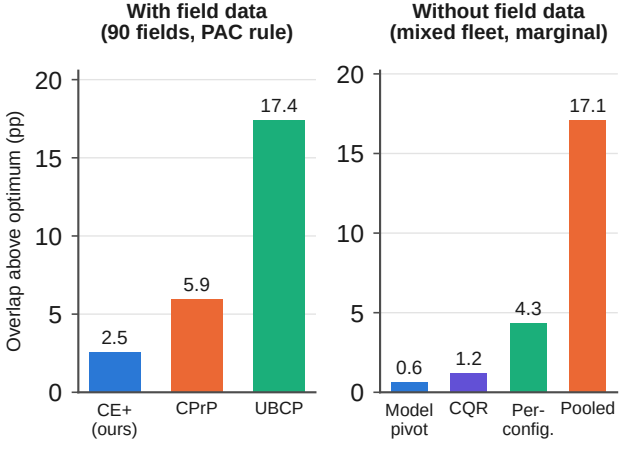
Certified coverage margins (simulation study)


1	**Logged runs**	target-field runs, or one run per field of other fields
2	**Exact run score**	S = widest gap or edge miss; zero miss $\Leftrightarrow S \le \lambda$
3	**Model pivot**	extreme-value model or Monte Carlo twin: each field's margin, no runs
4	**Conformal calibration**	certified margin λ (overlap 2λ): P(no miss) ≥ 1 − ε
