Input
Output
no: recalibrate on a larger reference plan
Logged runs
Field boundary & terrain
Stage 1: Reference runs
plan $\pi(\lambda_{ref})$
record $e_k(x)$
Stage 2: Coverage score
gap
$S = \lambda_{ref} + \max_x [r^\star(x) - w/2]$
Stage 3: Conformal calibration
$\hat{\lambda} = S_{(k_\star)}$
$k_\star = \lceil (n+1)(1-\varepsilon) \rceil$
no records: $V_i = S_i / \hat{q}_{f_i}$
Stage 4: Transfer check
no
$\hat{\lambda} \le \lambda_{ref}$?
yes
Stage 5: Deployed plan
spacing $w - 2\hat{\lambda}$
Pr[miss] $\le \varepsilon$
Line spacing & miss probability
Data: trajectories → coverage scores
Calibration: scores → line spacing
