no: enlarge λ_{ref} and recalibrate
1 Log runs on a reference plan
plan $\pi(\lambda_{\text{ref}})$
2 Score each run
missed strip
widest gap $\rightarrow S_i$
3 Take an order statistic
$1-\varepsilon$
$\hat{\lambda} = S_{(k_\star)}$
4 Transfer check
$\hat{\lambda} \le \lambda_{\text{ref}}$?
yes: go to step 5
5 Deploy
spacing $w - 2\hat{\lambda}$
data: trajectories to scores
calibration: scores to line spacing
